Photogrammetric documentation work in the Petrorian tower in Tarragona

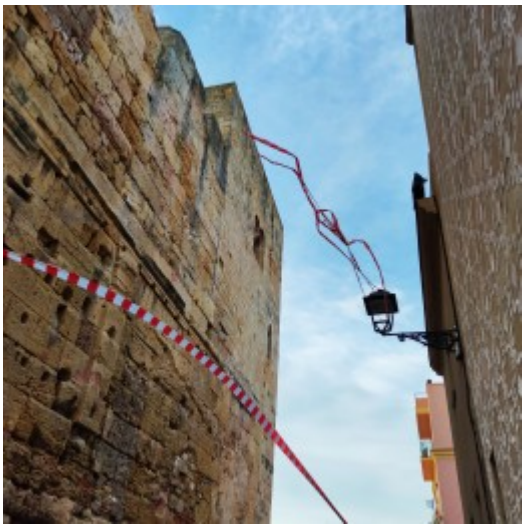

We are working these days on the **photogrammetric documentation of the north and west fronts of the Pretorian tower**, in Tarragona. With this technique, we can study and define precisely the shape, dimensions and position of the monument, from the measurements made on photographs.

The intervention is part of a set of projects funded by the Ministry of Education, Culture and Sports (Spanish Government), corresponding to a 2019 call for aid for conservation, protection and dissemination projects related to declared world heritage, co-funded by the Tarragona City Council.

Photogrammetric documentation works were scheduled in a joined project awarded to the URV Foundation and the ICAC, for an amount of 5,227.50 euros.
